Subject: ISA for the Bridge Boulevard – Coors Blvd to 8th St Reconstruction Project, Albuquerque, Bernalillo County, New Mexico; Control Number A300501

Dear Ms. Sims,

The ISA report for the project referenced above, dated June 26, 2015, was received in this office on August 27, 2015. In accordance with the direction in the 2014 Tribal/Local Public Agency Handbook, the Environmental Geology Section (EGS) has reviewed your report to verify that it meets industry-accepted standards for all appropriate inquiry (AAI) and the NMDOT’s reporting requirements.

Our review should not be viewed as comprehensive; rather the EGS verifies that appropriate data is documented and that it supports your conclusions and recommendations. As you know, the NMDOT requires that the T/LPA’s design scope be included. While the revised executive summary includes a general description of the scope, it lacks sufficient detail, which prevents the environmental professional from fully evaluating the risk a Finding might pose to the project.

In the absence of a sufficiently described scope, HDR took a conservative position and concluded that all 24 Findings represent recognized environmental conditions (RECs). You recommend that each REC be investigated further in the form of a preliminary site investigation (PSI), as opposed to a Phase 2 ESA.

The EGS is of the opinion that if HDR had at least the 30% plans and evaluated the Findings within the context of the design scope it contains, some RECs might be eliminated from further consideration and the PSI scope better delineated.
Regardless of our opinion outlined above, we believe your report reflects AAI and so it is **accepted** by the EGS. As you recommend additional investigation, be aware that the PSI report must be delivered to the EGS for review and acceptance. If you have questions regarding the content of this letter or have comments, do not hesitate to call me at 505-827-1078.

Sincerely,

Monica Stefanoff, Geoscientist  
Environmental Geology Section

Re: Initial Site Assessment Report Submittal  
Bridge Boulevard Reconstruction Project, Coors Blvd. to 8th St.  
Albuquerque, Bernalillo County, New Mexico

Dear Ms. Solano:

We are pleased to provide you with the above-referenced Initial Site Assessment for the Bridge Boulevard Reconstruction Project (Coors Blvd. to 8th St.). The attached report presents our methodology, findings, opinions, conclusions, and recommendations.

HDR appreciates the opportunity to serve Bernalillo County on this important project. If you have any questions or comments, please feel free to contact me at (602) 522-4321.

Cordially,

HDR ENGINEERING, INC.

Kelly W. Kading CPG

Note: A more complete acronym list is located in the Governmental Database Report, Appendix A.
Executive Summary

HDR Engineering, Inc. (HDR) has conducted an Initial Site Assessment (ISA) (also known as a Phase I Environmental Site Assessment, or ESA) for an approximately 3.54 mile section of Bridge Boulevard (and a short section of Tower Road) (Project Corridor), located in the City of Albuquerque and unincorporated Bernalillo County, New Mexico (see Figure 1 Project Location Map). The direct client for this ISA is Bernalillo County (the Client).

The purpose of this ISA is to document potential hazardous materials issues within the Project Corridor and the immediate surrounding area. This ISA will help to establish existing conditions as a baseline of information, and to identify the possible location of suspected hazardous materials that have the potential to be released into the subsurface. If these hazardous materials are present in concentrations above regulatory action levels, and are encountered during construction, they may pose health risks to workers and/or disposal liabilities for the project owner. This ISA will present an opinion of whether further investigation is warranted to determine the presence or absence of regulated hazardous materials at suspect locations. If additional investigation is required, it may be conducted in the form of a Preliminary Site Investigation (PSI), or during construction within the requirements of an identified process known as Environmental Construction Monitoring (ECM).

The project consists of an approximately 3.54 mile section of Bridge Boulevard and Tower Road, from Coors Boulevard (western terminus) to 8th Street (eastern terminus). The Project Corridor consists of a mix of commercial and residential development. The project is planned in three phases, from west to east: Phase 1 from Tower Road to Bridge Boulevard, then Bridge Boulevard to Goff Blvd., Phase 2 from Goff Blvd. to Isleta Blvd., and Phase 3 from Isleta Blvd. to 8th Street. The corridor reconstruction project will include roadway improvements located within the roadway right-of-way (ROW), including four lane continuity throughout the project, Americans with Disabilities Act (ADA) improvements, bicycle and pedestrian improvements, transit improvements, utility updates, and landscaping. The construction activities will require significant soil excavation for utilities, and minor grading at various locations to improve vertical curvature issues. Parcel acquisitions are anticipated for this project.

Environmental Data Resources, Inc. (EDR) was contracted by HDR to complete a database search (presented as Appendix A) of federal, state, local, and tribal environmental records for the Project Corridor. HDR provided EDR with the Project Corridor map and search parameters (up to a one-mile buffer zone from the Project Corridor), which constitutes the EDR search boundary (EDR buffer zone) (see Figure 2 Hazmat Site Project “Phase 1” Coors to Goff). A computerized environmental information database search was performed by EDR on February 6, 2015. In addition, Sanborn Fire Insurance maps were reviewed for the Project Corridor. Historical aerial photographs were reviewed by HDR at the Earth Data Analysis Center (EDAC) at the University of New Mexico on February 10, 2015. City Directories were reviewed at the Anderson Reading Room at the University of New Mexico Zimmerman Library. According to HDR’s review of historical data sources, the Project Corridor has been developed for commercial and residential uses since at least the 1930s, with newer development in the western end of the corridor.
This Phase I ESA identifies Recognized Environmental Conditions (RECs) that may adversely affect the Project Corridor, and was conducted in accordance with the scope and limitations of the American Society for Testing and Materials (ASTM) Practice E 1527-13. This ISA also conforms to guidance provided in the New Mexico Department of Transportation’s Hazardous Waste Handbook. This report includes a summary of the review of the environmental databases, a review of historical data sources, personal interviews, and the site reconnaissance conducted on February 10, 2015. Any exceptions to or deletions from these ASTM practices are described later in this report.

Findings

General findings of this assessment include the following:

- The Project Corridor extends approximately 3.5 miles, from Coors Road SW at the western terminus of the project, eastward along Tower Road and then Bridge Boulevard, crossing the Rio Grande then on to 8th Street at the eastern terminus of the project. The roadway improvements will be located within the roadway right-of-way (ROW), and at this time, only minor right-of-way acquisitions are anticipated. The surrounding area consists of a mix of residential, commercial, and public land uses.

  The project is anticipated to be developed in three phases, from west to east, as follows:

  - Phase I – Tower Road, from Coors Boulevard to Old Coors Drive, then Bridge Boulevard from Old Coors Drive to Goff Boulevard
  - Phase II – Bridge Boulevard from Goff Boulevard to Isleta Boulevard
  - Phase III – Bridge Boulevard from Isleta Boulevard to 8th Street

  Extensive ground disturbance, including deep excavation for utility upgrades, will be required for the project.

- The Project Corridor is located within the Rio Grande Valley and the Upper Santa Fe geologic groups. The soil types located within the Project Corridor consists of Greta-Sheppard Loamy Fine Sands, Greta Fine Sandy Loam, and Sheppard Loamy Fine Sand. The Project Corridor is located within the Middle Rio Grande Valley in the southern Rocky Mountains, and is part of the Rio Grande Rift. Multiple faults have been mapped within the Albuquerque city limits, and generally consist of normal faults at high angle, contributing to the horst and graben, dropped block faults of the middle Rio Grande Rift.

  Groundwater in the area is found at variable depths, ranging from a few feet to hundreds of feet. Depth to groundwater is affected by a combination of distance from the Rio Grande, local elevation, fault influence on groundwater, and municipal pumping. The groundwater flow direction is generally to the south or southeast, toward or along the long axis of the Rio Grande as it flow south through Bernalillo County.

  Portions of the Project Corridor are located within the limits of a 100-year flood zone.

- The EDR report identified multiple listings for sites of concern. Section 6.1 includes a summary table that includes site descriptions and regulatory listing information that is germane to a risk ranking determination. All of the identified sites of concern, from the
regulatory database review and the site reconnaissance, are either existing or former UST/LUST sites, or dry cleaners.

EDR proprietary records found 150 “Historic Auto Stations”, 36 “Historic Cleaners”, 13 “RGA LUST” cases, and 1 “EDR MGP (Manufactured Gas Plant) sites. HDR used these non-ASTM data sources as additional information to augment our other historic data source reviews. It should be noted that the EDR proprietary databases are not required in the ASTM or NMDOT protocols, but they do provide a summary of sites from which additional research can be conducted.

The EDR report identified 42 “orphan” listings (listings for sites with insufficient or conflicting address information, which renders the sites unmappable), corresponding to approximately 27 sites. HDR reviewed the “orphan” listings, and found none of the identified sites to be located in the immediate vicinity of the Project Corridor.

- Ms. Amor Solano P.E., a Project Engineer for the Bernalillo County Public Works Department, provided as-built drawings for the project corridor. These drawings indicate that the pipes in some areas may contain asbestos (“AC” pipes) along the project corridor (Bridge Blvd.) as well as numerous laterals that carry water down residential streets connecting to the mains beneath Bridge Blvd. Specific locations are noted on the as-built drawings.

- On February 10, 2015 HDR (Kading) conducted a reconnaissance of the Project Corridor and surrounding properties. The Project Corridor is heavily developed, with first-, second-, and third-generation residential, commercial, and public-use development. The Southwest Valley has been inhabited for hundreds of years, and modern development of the Bridge Blvd. corridor began in the 1920s. The east end of the project corridor, for several hundred feet east and west of the Rio Grande, has experienced the most development (and redevelopment). The location of the bridge has driven commercial traffic to the area for decades. The central portion of the project, generally from Sunset Road through the Five Points area to Atrisco Drive, was developed between the 1940s and 1970s as a mixed residential and commercial area. The portion of the project from Atrisco Drive west to Coors Blvd includes the most recently developed properties, with commercial land uses along Tower Road, a relatively new convenience store and fueling facility at Old Coors Drive (Valero) and newer homes between Atrisco and Old Coors Drive.

- A summary of findings (ISA Data Table) including information from the site reconnaissance, regulatory database review, NMED file review, and historical data source review is included in the Findings summary in Section 6.1. The ISA Data Table includes the sites of concern (listed by project Phase and individual site tag [letter]), site name (current and/or historic), address, primary issue of concern, source of the data, relative risk ranking, and recommendation for Phase II assessment. Only sites with a High or Indeterminate risk ranking are included in the ISA Data Table. Figures 2-4 depict the location of sites of concern, along with sections of the ISA Data Table specific to the depicted Phase of the project.

<sup>(3)</sup> Indicates primary information sources for listing: R=Reconnaissance, I=Interview, D=Database, H=Historical Source (Sanborns, historical aerial photographs, historical topographic maps)

<sup>(4)</sup> Risk of potential impacts onsite; Low /Moderate/Indeterminate/High

**Opinions**

HDR has reviewed the stated data sources, which are part of the ASTM 1527-13 assessment protocol, as well as NMDOT guidance. Based upon the review of the data, HDR has developed the following professional opinions:

- A total of 24 sites (High and Indeterminate Risk) were identified within or adjacent to the Project Corridor that constitute RECs, as defined by ASTM. Each of these sites has the potential to impact the project through the presence of residual contaminants in soil and/or groundwater. By project Phase, the 24 sites are divided as follows: Phase I – 7 sites; Phase II – 9 sites; and Phase III – 8 sites.

**Conclusions**

Based upon the above-detailed Findings and Opinions, HDR concludes that 24 RECs have been identified for the Project Corridor, as presented in the Findings section above. The following statement is required by ASTM E 1527-13 as a positive declaration of whether RECs were found within the Project Corridor:

*HDR has performed a Phase I ESA in conformance with the scope and limitations of ASTM E 1527-13 of the Bridge Blvd / Tower Road project, between Coors Blvd. (western terminus of the project) and 8th Street (eastern terminus of the project), located in Albuquerque and unincorporated Bernalillo County, New Mexico (Project Corridor). Any exceptions to or deletions from these practices are described in previous sections of this report. This report has revealed indications of RECs in connection with the Project Corridor.*
Recommendations

Recommendations included in this report were developed through the investigative procedures described in the Scope of Services, Significant Assumptions, and Limitations sections of this report. These findings should be reviewed within the context of the limitations provided in the Limitations section.

Based upon the identified RECs for the Project Corridor, HDR makes following recommendations:

Recommendation 1

HDR recommends that the client conduct Phase II site investigations for each site to determine location and severity of suspected impacts from the identified risk sites. The Phase II work should include drilling, sample collection for geologic parameters and laboratory analysis of soils, sample collection and laboratory analysis of groundwater samples (in areas where groundwater will be disturbed by the project), and a report of findings relative to regulatory action levels for the contaminants of concern. The Phase II work should be conducted in accordance with state and federal requirements regarding qualifications of staff, laboratory methods employed, and soil boring / monitoring well abandonment protocols adjudicated by the State.

Recommendation 2

HDR recommends that all construction contractors shall be instructed to immediately stop all subsurface activities in the event that potentially hazardous materials are encountered, an odor is identified, or significantly stained soil is visible. Contractors shall be instructed to follow all applicable regulations regarding discovery and response for hazardous materials encountered during the construction process.

Recommendation 3

HDR recommends that the client consider the “shelf life” of Phase I documents in determining risk. ASTM E 1527-13: 4.6 states that a conforming “Phase I” report is valid for a period of 180 days, and may be updated during the 180 days to 1-year timeframe. The report is valid for use in any of the CERCLA defenses ONLY if it is updated within this time frame. If greater than one year passes from the final report date, the Phase I effort would need to be repeated to remain in compliance with ASTM and the “All Appropriate Inquiry” (AAI) protection.
1.0 Introduction

1.1 Purpose

The purpose of this Phase I ESA is to document the evaluation of the Project Corridor for indications of “recognized environmental conditions.” This purpose is mirrored in the New Mexico Department of Transportation’s “Hazardous Material Assessment Handbook” (March 2010). Although the March 2010 NMDOT “Handbook” specifies that the ISA be conformant to the ASTM E 1527-05 standard, HDR requires that Phase I-type reports conform to the most recent ASTM E-1527 standard. Therefore, this report conforms to the ASTM E 1527-13 standard (updated in 2013).

ASTM Practice E 1527-13 defines the following categories of a REC:

**REC**

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions (see definition below).

ASTM E 1527-13 defines release as a release of any hazardous substance or petroleum product shall have the same meaning as the definition of “release” in CERCLA 42 U.S.C. § 9601(22)).

**Historical REC (HREC)**

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

**Controlled REC (CREC)**

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Additional conditions that are not included under the definitions of a REC, but are defined by ASTM Practice 1527-13 include:
De Minimis

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis neither are not recognized environmental conditions nor controlled recognized environmental conditions.

Business Environmental Risk

These are risks which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice.

Consideration of business environmental risk issues may involve addressing one or more non-scope considerations.

1.2 Report Users

HDR received authorization from the Bernalillo County Public Works Department (BCPWD) the County) to conduct an ISA for an approximately 3.5 mile section of Bridge Boulevard SW and Tower Road SW, through the City of Albuquerque and parts of unincorporated Bernalillo County, New Mexico (hereafter referenced as the Project Corridor). This ISA has been prepared for the County, and only the County and its funding partners (FHWA, NMDOT) have the right to rely on the contents of this report.

1.3 Scope of Services, Significant Assumptions, and Limitations

The services provided for this Study consisted of the following:

- Provide a description of the Project Corridor including current land uses (Sections 2.1 and 2.2).
- Provide a general description of the topography, soils, geology, and groundwater flow direction (Section 2.4).
- Review reasonably ascertainable and reviewable regulatory information published by federal, state, local, tribal, health, and/or environmental agencies pertaining to the Project Corridor (Section 4.1).
- Review historical data sources for the Project Corridor, including aerial photographs, topographic maps, fire insurance maps, city directories, and other readily available development data (Section 4.3).
- Interview current owner of the Project Corridor or other persons with knowledge of the development history of the Project Corridor (Section 4.6).
- Conduct an area reconnaissance and an environmental review—including a visual review of adjoining properties—with a focus on indications of hazardous substances, petroleum products, polychlorinated biphenyls (PCBs), wells, storage tanks, solid waste
disposal pits and sumps, and utilities (Section 4.7).

- Determine data gaps in the information obtained and comment on their significance in identifying RECs for the Project Corridor (Section 5.0).
- Prepare a written report of findings, opinions, and conclusions (Section 6).

The goal of this scope of services is to assist the user in identifying conditions in the Project Corridor that may indicate risks regarding hazardous materials storage, disposal, or other impacts. The resulting report may qualify the user for relief from liabilities as one of three “defenses” identified in the 2002 Brownfields Amendments to the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Section 9607 (AAI subsections). These three defenses include:

2. The “contiguous Study corridor owner” defense pursuant to 42 U.S.C. § 9607q; and
3. The “bona fide prospective purchaser” defense pursuant to 42 U.S.C. §9607(r).

Federal regulations (42 U.S.C §9601(35)(A) & (B), §9607(b)(3), §9607(q); and §9607(r)), promulgated by the United States (U.S.) Environmental Protection Agency (EPA), require that liability release be based (in part) on completion of All Appropriate Inquiries (AAI) prior to purchase of a property. Those inquiries are documented by Phase I reports (ESAs). EPA has agreed that the recently developed ASTM guidance (ASTM Practice E 1527-13: 3.2.6) specifies and interprets AAI requirements.

A user is defined by ASTM Practice E 1527-13 as the party seeking to use Practice E 1527 to complete an ESA of the Project Corridor, and may include a potential purchaser of land in the Project Corridor, a potential tenant of the Project Corridor, an owner of land in the Project Corridor, a lender, or a Project Corridor technical manager. Investigative areas not included in the standard ASTM ESA scope include: asbestos, lead-based paint, lead in drinking water, radon or urea formaldehyde, wetland issues, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, and high voltage power lines. Please note that Section 4.7 does include a discussion of the potential for asbestos containing underground pipes, and this is a requirement of the NMDOT ISA scope. HDR includes this information only as a courtesy, and has not verified any underground building material by visual means or by sampling and analysis.

Indoor air quality from sources such as mold and asbestos is not included in the ASTM standard except to the extent that indoor air impacts are related to Superfund release and/or caused by releases of hazardous substances into subsurface soil or groundwater (vapor intrusion).

The potential for vapor encroachment or intrusion into structures in the Project Corridor are considered and identified from on site or off site sources based on the experience of the Environmental Professional.
The scope of services for this ISA also does not include the completion of soil borings, the installation of groundwater monitoring wells, or the collection of soil or groundwater samples. State and national policies and standards relevant to vapor intrusion are in flux and subject to change.

HDR has made certain assumptions in preparing the scope of this assessment:

- Data gathered from public information sources (i.e., libraries or public regulatory agencies) are accurate and reliable.
- Site operations reflect site conditions relative to potential releases and no intentional concealment of environmental conditions or releases has occurred.
- Interview information is directly reported as gathered by the assessor and is limited by the accuracy of the interviewee’s recollection and experience.
- Published geologic information and site observations made by the environmental professional are used to estimate likely contaminant migration pathways in the subsurface. These estimates by the environmental professional are limited in accuracy and are generally cross-referenced with existing information about similar sites and environmental releases in the area.
- Regulatory information is limited to sites identified after the late 1980s because reliable records were not kept by regulatory agencies prior to that time frame.

The findings and conclusions presented in this report are based on the procedures described in ASTM Practice E 1527-13, informal discussions with various agencies, a review of the available literature cited in this report, conditions noted at the time of this Phase I ESA, and HDR’s interpretation of the information obtained as part of this Phase I ESA. The findings and conclusions are limited to the specific elements of investigation described in this report, and by the accuracy and completeness of the information provided by others.

An ESA cannot entirely eliminate uncertainty regarding the potential for RECs. Conducting this assessment is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a Project Corridor within reasonable limits of time and cost. In conducting its services, HDR used a degree of care and skill ordinarily exercised under similar circumstances by reputable members of its profession practicing in the same locality. This Phase I ESA conforms to the level of documentation required in ASTM Practice E 1527-13. However, HDR may omit discussion of certain records; i.e., sources deemed, in HDR’s professional opinion, to be inapplicable or of limited value to the specific needs of this client. In accordance with ASTM; however, if the lack of available documentation results in a data gap, this data gap is identified herein and its significance is discussed.

HDR uses a relative risk ranking system to simplify risk evaluation and provide criteria for determining the need for further investigation. A relative risk level has been assigned to each site by HDR’s qualified assessor, using a qualitatively assigned ranking, from low risk to high risk, or (in some instances) indeterminate risk. The purpose of the relative risk designation is to provide a diagnostic tool for determining the scope of subsequent investigative activities. The client may choose to investigate (or not investigate) any site within the Project Corridor,
regardless of the reported risk ranking, based on such issues as the distance between the environmental records search buffer zone and the identified environmental condition on the ranked site. The criteria for each of the risk levels are as follows:

**Low Risk.** This designation applies to sites that pose a relatively low environmental risk, such as undeveloped land, residential property, agricultural property, and light retail operations that display no evidence of present or historic waste handling. This designation may also apply to sites with businesses that may handle small amounts of hazardous materials, but do not use underground storage tanks (USTs) or aboveground storage tanks (ASTs) and practice appropriate waste-handling procedures. These businesses must also display an awareness of, and need for, protective measures of potential release pathways, such as practicing diligent surface spill cleanup and Best Management Practices. Examples of low risk sites include: undeveloped land, residential property, agricultural property, banks, and warehouse facilities.

**Moderate Risk.** This designation applies to sites with businesses that handle larger amounts of hazardous materials than low risk sites, and/or display less diligence in hazardous materials handling practices. Moderate risk sites also include vacant sites of indeterminate usage and former UST sites with tanks removed prior to 1988. Determination of the need for further investigation at moderate risk sites is site-specific, based on the physical condition and history of the site, the site’s location, and the scope of work to be performed during road reconstruction. Examples of moderate risk sites include: auto repair shops with improper waste-handling practices or a high degree of surface staining, former service stations, or any facility for which additional review may be warranted.

**High Risk.** This designation applies to sites with a high potential for adverse impacts to the Study. High risk sites include active service stations; former service stations with USTs removed prior to implementation of appropriate state and federal UST regulations; service stations with known leaking petroleum storage tank (LPST) or cases; industrial facilities with large waste-handling operations or hazardous materials usage or storage; and sites of reported emergency response-type spills, regardless of corrective actions taken. A conservative approach is taken regarding active service stations. Even if no LPSTs are identified by the regulatory agencies, a “material threat of release” (ASTM term) exists, therefore active service stations are considered “high risk”.

A high risk designation indicates that intrusive sampling and subsequent investigation is appropriate. A high risk designation may be applied to any site within the Project Corridor, regardless of facility type, if the site inspection by HDR indicates that substantial risk is present. Examples of high risk sites include: operating UST sites, known LPST or release cases, manufacturing plants, former service stations that recently closed, pesticide batching plants, and vehicle accident or train derailment sites with a recorded hazardous materials release.

**Indeterminate Risk.** These are sites which, at the time of report preparation, did not include sufficient information to include a high, medium or low ranking. Indeterminate-risk sites often require additional file review to determine the details of any related environmental issues at the site.
When HDR assigns a risk ranking to a site, the risk ranking criteria are reviewed and concurred with by at least one environmental professional as defined in ASTM. It is HDR policy to have subjective criteria cross-reviewed for accuracy and adherence to its assessment protocols and internal quality assurance standards. It is worthwhile to note that risk ranking does not directly correspond to whether a site qualifies as a REC; rather, the risk ranking system is intended as a method of categorizing sites on large study areas for consideration of common contamination characteristics.
2.0 Site Description

2.1 Location and Legal Description

The Project Corridor includes an approximately 3.5 mile section of Bridge Boulevard SW and Tower Road SW, located through the City of Albuquerque and portions of unincorporated Bernalillo County, New Mexico (see Figure 1 Project Location Map). The Project Corridor extends approximately 3.5 miles, from Coors Road SW at the western terminus of the project, eastward along Tower Road and then Bridge Boulevard, crossing the Rio Grande then on to 8th Street at the eastern terminus of the project. The roadway improvements will be located within the roadway right-of-way (ROW), and at this time, only minor right-of-way acquisitions are anticipated. The surrounding area consists of a mix of residential, commercial, and public land uses.

The project is anticipated to be developed in three phases, from west to east, as follows:

- Phase I – Tower Road, from Coors Boulevard to Old Coors Drive, then Bridge Boulevard from Old Coors Drive to Goff Boulevard
- Phase II – Bridge Boulevard from Goff Boulevard to Isleta Boulevard
- Phase III – Bridge Boulevard from Isleta Boulevard to 8th Street

The data provided in later sections of this report divides the hazardous materials assessment results into the project Phases, for ease of future planning.

2.2 Site and Vicinity Characteristics

The United States Geological Survey (USGS) 7.5-minute Bernalillo quadrangle map for Bernalillo County, New Mexico indicates that the Project Corridor is located approximately 5,020 ft (at Coors Road) to 4,950 ft (at the Rio Grande) above mean sea level (amsl). The topography in the Project Corridor consists of the gentle slopes of the inner valley of the Rio Grande.

2.3 Description of Structures, Roads, and Other Site Improvements

The Project Corridor extends in an east/west direction for approximately 3.5 miles along Bridge Boulevard and Tower Road. Numerous residential roadways intersect and surround the project corridor. The Rio Grande is the dominant water feature of the project, but the project corridor is also crossed by several irrigation and drainage ditches. The Project Corridor is a main thoroughfare, and as such is the location of multiple utilities, both underground and aboveground on utility poles. Commercial development predominates on the eastern two-thirds of the corridor and at the far west end, with residential development as the primary land use in the center and center-west portions of the project.
2.4 Area Geology and Hydrogeology

According to topographic information provided in the EDR report map (Appendix A), based on the USGS 7.5 Minute topographic map for Bernalillo, Sandoval County, New Mexico, the Project Corridor elevation is approximately 5,020 to 4,950 feet amsl.

The Project Corridor is located within the Rio Grande Valley and the Upper Santa Fe geologic groups. The soil types located within the Project Corridor consists of Gretia-Sheppard Loamy Fine Sands, Gretia Fine Sandy Loam, and Sheppard Loamy Fine Sand. The Project Corridor is located within the Middle Rio Grande Valley in the southern Rocky Mountains, and is part of the Rio Grande Rift. Multiple faults have been mapped within the Albuquerque city limits, and generally consist of normal faults at high angle, contributing to the horst and graben, dropped block faults of the middle Rio Grande Rift.

Groundwater in the area is found at variable depths, ranging from a few feet to hundreds of feet. Depth to groundwater is affected by a combination of distance from the Rio Grande, local elevation, fault influence on groundwater, and municipal pumping. The groundwater flow direction is generally to the south or southeast, toward or along the long axis of the Rio Grande as it flow south through Bernalillo County.

Portions of the Project Corridor are located within the limits of a 100-year flood zone.
3.0 User Provided Information

The user of the report provided HDR with maps of the Project Corridor, and utility maps to denote locations of possible asbestos-containing subsurface water pipes. No additional information was provided.
4.0 Records Review

4.1 Environmental Records Review

EDR was contracted by HDR to complete a database search of federal, state, local, and tribal environmental record listings for the Project Corridor. A computerized environmental information database search was performed for the Project Corridor on February 6, 2015. The databases searched included federal, state, local, and tribal databases as defined by ASTM E 1527-13, as well as additional EDR proprietary databases. It is important to note that the New Mexico Environment Department (NMED) does not provide data to commercial search services for certain databases (last data provided in 2006 for several state databases). HDR bridged that data gap by reviewing online NMED databases for certain facilities along the corridor. The results of the database search are summarized in Table 1 and the following paragraphs. Only databases that list sites with the potential to materially affect subsurface conditions are included in the table - a complete copy of the EDR environmental database report is included in Appendix A.

Table 1. Summary of Environmental Database Search

</tr>
</tbody>
</table>
The EDR report identified multiple listings for sites of concern. Section 6.1 includes a summary table that includes site descriptions and regulatory listing information that is germane to a risk ranking determination. All of the identified sites of concern, from the regulatory database review and the site reconnaissance, are either existing or former UST/LUST sites, or dry cleaners.

EDR proprietary records found 150 “Historic Auto Stations”, 36 “Historic Cleaners”, 13 “RGA LUST” cases, and 1 “EDR MGP (Manufactured Gas Plant) sites. HDR used these non-ASTM data sources as additional information to augment our other historic data source reviews. It should be noted that the EDR proprietary databases are not required in the ASTM or NMDOT protocols, but they do provide a summary of sites from which additional research can be conducted.

The EDR report identified 42 “orphan” listings (listings for sites with insufficient or conflicting address information, which renders the sites unmappable), corresponding to approximately 27 sites. HDR reviewed the “orphan” listings, and found none of the identified sites to be located in the immediate vicinity of the Project Corridor.

4.2 Additional Regulatory Information

Online NMED databases (State Cleanup Program, Voluntary Remediation Program, and Superfund Sites in New Mexico) were reviewed to bridge the information gap for databases that have not reported to EDR for a number of years. No significant additional findings were noted.

Hard files were requested for certain LUST cases located within the Project Corridor. These files were reviewed at NMED offices in Albuquerque, and excerpts of those files were copied for in-depth review. These copies are not included in this report, since the files were very large (too large to include as an appendix). Summary information from the file reviews is included in the ISA Data Table in section 4.6.

4.3 Historical Use Information

The objective of reviewing historical use information is to develop a history of previous land uses in the vicinity of the Project Corridor. This information was used to assess the previous land uses for potential hazardous materials impacts that may affect the Project Corridor. HDR reviewed those historical sources that were reasonably ascertainable and likely to provide useful information, as defined by the ASTM standard.
4.3.1 Fire Insurance Maps
A Sanborn Map search was conducted by EDR, however, the corridor was identified as an unmapped property. No Sanborn Fire Insurance maps were available.

4.3.2 City Directory Information
City Directories were reviewed by HDR (Kading) at the University of New Mexico Zimmerman Library, Anderson Reading Room, Albuquerque, New Mexico on February 11, 2015. City Directories from the following years were reviewed: 2006, 1996, 1986, 1976, 1966, 1956, and 1949. Notes from the review are included as Appendix B, and the information is summarized in the ISA Data Table in section 4.6. The City Directories were useful in identifying sites that had been service stations (USTs) or dry cleaners over a 66-year period. Many facilities no longer exist, or have changed to another business use. Also many businesses have operated under different names at the same address over the years.

4.3.3 Tax Map
Property tax maps were not reviewed for the Project Corridor.

4.3.4 Historical Aerial Photographs
Historical aerial photographs are valuable for the environmental assessor to review features of the Project Corridor and surrounding properties over a long period of time. Aerial photographs were reviewed at, and acquired from, the Earth Data Analysis Center at the University of New Mexico. HDR reviewed historical aerial photographs (Appendix C) for the following years: 1964, 1973, 1980, 1988, 1995, and 2013.

**1964:** By 1964 (the earliest aerial photograph available), the project corridor was developed with residential and commercial development throughout the corridor. West of the Five Points area, only sparse residential development was present.

**1973:** Additional residential development had occurred, and many of the commercial businesses along Tower Road had been constructed. Coors Boulevard did not exist in 1973.

**1980:** The project corridor had not changed significantly since the 1973 photograph, with the exception of additional commercial development along Tower Road.

**1988:** The project corridor had not changed significantly, although configuration changes at several of the gas stations were apparent. Some had removed pumps and canopies, and others had reconfigured from traditional service bay buildings to larger convenience store-and-canopy styles, which became popular in the 1980s. Coors Boulevard was under construction at the west end of the project.

**1995:** The project corridor appeared much as it does today, with only the Valero convenience store at Old Coors Drive not yet constructed.

**2013:** The project corridor appeared much as it does today, and the Valero convenience store had been constructed.
4.3.5 Historical Topographic Maps

Historical topographic maps were reviewed on the Nationwide Environmental Title Research Historical Aerials online database (February 11, 2015) to provide an overview of the area relative to potential previous land uses. HDR reviewed historical USGS 7.5 minute series topographic maps (1997, 1985) were reviewed. These maps served to augment information that was gathered in the historic aerial photograph review.

4.4 Environmental Liens, Activity Use Limitations (AULs) and Additional Information

An environmental lien search was not conducted as part of this ESA.

4.5 Interviews

4.5.1 Onsite Interviews

No onsite interviews were performed for the corridor, per the scope of work of the project, and client direction.

4.5.2 Offsite Interviews

Ms. Amor Solano P.E., a Project Engineer for the Bernalillo County Public Works Department, provided as-built drawings for the water system that follows Bridge Blvd. and Tower Road (included as Appendix D). She also reported that the project will include extensive utility improvements and relocations.

4.6 Site Reconnaissance

On February 10, 2015, HDR (Kading) conducted a reconnaissance of the Project Corridor and surrounding properties. Photographs were taken during the site reconnaissance, and are presented in Appendix E.

The Project Corridor is heavily developed, with first-, second-, and third-generation residential, commercial, and public-use development. The Southwest Valley has been inhabited for hundreds of years, and modern development of the Bridge Blvd. corridor began in the 1920s. The east end of the project corridor, for several hundred feet east and west of the Rio Grande, has experienced the most development (and redevelopment). The location of the bridge has driven commercial traffic to the area for decades. The central portion of the project, generally from Sunset Road through the Five Points area to Atrisco Drive, was developed between the 1940s and 1970s as a mixed residential and commercial area. The portion of the project from Atrisco Drive west to Coors Blvd includes the most recently developed properties, with commercial land uses along Tower Road, a relatively new convenience store and fueling facility at Old Coors Drive (Valero) and newer homes between Atrisco and Old Coors Drive.

A summary of findings (ISA Data Table) including information from the site reconnaissance, regulatory database review, NMED file review, and historical data source review is included in the Findings summary in Section 6.1. The ISA Data Table includes the sites of concern (listed by project Phase and individual site tag [letter]), site name (current and/or historic), address,
primary issue of concern, source of the data, relative risk ranking, and recommendation for Phase II assessment. Only sites with a High or Indeterminate risk ranking are included in the ISA Data Table. Figures 2-4 depict the location of sites of concern, along with sections of the ISA Data Table specific to the depicted Phase of the project.

4.7 Utilities and Polychlorinated Biphenyls (PCBs)

HDR personnel noted aboveground and indications of subsurface utilities, for utilities typical of a developed municipal area. Water, sewer, electrical, telecommunications cable, and gas utilities were noted. Pole-mounted transformers were noted in numerous locations. HDR contacted PNM, the power provider for the Project Corridor. PNM reported that they employ a “test and replace” protocol for assessment and replacement of PCB-containing transformers. The representative of PNM stated that given the age of the development of the Project Corridor, it is possible that PCB oils would have been used in the past in electrical equipment operated by PNM.

The NMDOT “Handbook” requires commentary regarding the potential for asbestos in subsurface piping. HDR contacted BCPWD, and Ms. Solano provided as-built drawings of the water delivery pipes located beneath the corridor. These drawings indicate that the pipes in some areas may contain asbestos (“AC” pipes) along the project corridor (Bridge Blvd.) as well as numerous laterals that carry water down residential streets connecting to the mains beneath Bridge Blvd. Specific locations are noted on the as-built drawings. HDR makes no guarantees or warranties regarding the construction of these pipes or any other subsurface materials, and has not verified any underground building material by visual means or by sampling and analysis.
5.0 Data Gap Analysis

The ASTM E 1527-13 standards require a listing of “data gaps,” including data failure, encountered during the investigative process that may affect the validity of the conclusions drawn by the environmental professional. The ASTM E 1527-13: 12.7 standard also requires that the environmental professional estimate the relative importance of the data gaps. Generally, gaps in available data are related to the availability of historical data sources for specific sites of concern. The environmental professional uses multiple historical data sources as a method to provide coverage for data gaps. Historical information is collected on a recurring basis, and the passage of time between data sets may or may not constitute a significant gap in data coverage. For this Study, the following items may constitute a data gap as defined by ASTM E 1527-13.

Specifically for this Assessment; the following data gaps are noted as:

- Absence of Sanborn fire insurance maps;
- Absence of site-specific interviews;
- Gaps in regulatory data reported to EDR by NMED; and
- Aerial photography prior to 1964.

The inability to obtain and review the Sanborn fire insurance maps does not present a significant data gap, since adequate historical information from other sources was available and reviewed. The absence of site-specific interviews could be significant, but the corridor has an adequate amount of historical information available. The gaps in NMED regulatory data reporting to EDR was bridged by review of online databases and review of case files for higher-risk sites at NMED. The lack of aerial photography prior to 1964 does not present a significant data gap due to the presence of other supporting historical information.
6.0 Findings, Opinions, and Conclusions

HDR conducted a Phase I ISA for an approximately 3.5 mile section of Tower Road and Bridge Boulevard, between Coors Boulevard (western project terminus) and 8th Street (eastern project terminus), in Albuquerque and unincorporated Bernalillo County, New Mexico (Project Corridor). The project is divided into three Phases for study, and those Phases are reflected in the presentation of sites of concern on Figures 2-4.

This ISA identifies RECs that may adversely affect the Project Corridor and was conducted in accordance with the scope and limitations of the American Society for Testing and Materials (ASTM) Practice E 1527-13, as well as guidance provided in the NMDOT “Hazardous Material Assessment Handbook” (March 2010). This report includes a summary of the site reconnaissance conducted on February 10, 2015, a review of environmental databases, a review of historical data sources, and information provided by the County. Any exceptions to or deletions from the ASTM practices have been described in this report.

6.1 Findings

General findings of this assessment include the following:

- The Project Corridor extends approximately 3.5 miles, from Coors Road SW at the western terminus of the project, eastward along Tower Road and then Bridge Boulevard, crossing the Rio Grande then on to 8th Street at the eastern terminus of the project. The roadway improvements will be located within the roadway right-of-way (ROW), and at this time, only minor right-of-way acquisitions are anticipated. The surrounding area consists of a mix of residential, commercial, and public land uses.

- The project is anticipated to be developed in three phases, from west to east, as follows:
  - Phase I – Tower Road, from Coors Boulevard to Old Coors Drive, then Bridge Boulevard from Old Coors Drive to Goff Boulevard
  - Phase II – Bridge Boulevard from Goff Boulevard to Isleta Boulevard
  - Phase III – Bridge Boulevard from Isleta Boulevard to 8th Street

- Extensive ground disturbance, including deep excavation for utility upgrades, will be required for the project.

- The Project Corridor is located within the Rio Grande Valley and the Upper Santa Fe geologic groups. The soil types located within the Project Corridor consists of Gretia-Sheppard Loamy Fine Sands, Gretia Fine Sandy Loam, and Sheppard Loamy Fine Sand. The Project Corridor is located within the Middle Rio Grande Valley in the southern Rocky Mountains, and is part of the Rio Grande Rift. Multiple faults have been mapped within the Albuquerque city limits, and generally consist of normal faults at high angle, contributing to the horst and graben, dropped block faults of the middle Rio Grande Rift.

- Groundwater in the area is found at variable depths, ranging from a few feet to hundreds of feet. Depth to groundwater is affected by a combination of distance from the Rio Grande, local elevation, fault influence on groundwater, and municipal pumping. The
groundwater flow direction is generally to the south or southeast, toward or along the long axis of the Rio Grande as it flow south through Bernalillo County.

Portions of the Project Corridor are located within the limits of a 100-year flood zone.

- The EDR report identified multiple listings for sites of concern. Section 6.1 includes a summary table that includes site descriptions and regulatory listing information that is germane to a risk ranking determination. All of the identified sites of concern, from the regulatory database review and the site reconnaissance, are either existing or former UST/LUST sites, or dry cleaners.

  EDR proprietary records found 150 “Historic Auto Stations”, 36 “Historic Cleaners”, 13 “RGA LUST” cases, and 1 “EDR MGP (Manufactured Gas Plant) sites. HDR used these non-ASTM data sources as additional information to augment our other historic data source reviews. It should be noted that the EDR proprietary databases are not required in the ASTM or NMDOT protocols, but they do provide a summary of sites from which additional research can be conducted.

  The EDR report identified 42 “orphan” listings (listings for sites with insufficient or conflicting address information, which renders the sites unmappable), corresponding to approximately 27 sites. HDR reviewed the “orphan” listings, and found none of the identified sites to be located in the immediate vicinity of the Project Corridor.

- Ms. Amor Solano P.E., a Project Engineer for the Bernalillo County Public Works Department, provided as-built drawings for the project corridor. These drawings indicate that the pipes in some areas may contain asbestos (“AC” pipes) along the project corridor (Bridge Blvd.) as well as numerous laterals that carry water down residential streets connecting to the mains beneath Bridge Blvd. Specific locations are noted on the as-built drawings.

- On February 10, 2015 HDR (Kading) conducted a reconnaissance of the Project Corridor and surrounding properties. The Project Corridor is heavily developed, with first-, second-, and third-generation residential, commercial, and public-use development. The Southwest Valley has been inhabited for hundreds of years, and modern development of the Bridge Blvd. corridor began in the 1920s. The east end of the project corridor, for several hundred feet east and west of the Rio Grande, has experienced the most development (and redevelopment). The location of the bridge has driven commercial traffic to the area for decades. The central portion of the project, generally from Sunset Road through the Five Points area to Atrisco Drive, was developed between the 1940s and 1970s as a mixed residential and commercial area. The portion of the project from Atrisco Drive west to Coors Blvd includes the most recently developed properties, with commercial land uses along Tower Road, a relatively new convenience store and fueling facility at Old Coors Drive (Valero) and newer homes between Atrisco and Old Coors Drive.

- A summary of findings (ISA Data Table) including information from the site reconnaissance, regulatory database review, NMED file review, and historical data source review is included in the Findings summary in Section 6.1. The ISA Data Table includes the sites of concern (listed by project Phase and individual site tag [letter]), site name (current and/or historic), address, primary issue of concern, source of the data,
relative risk ranking, and recommendation for Phase II assessment. Only sites with a High or Indeterminate risk ranking are included in the ISA Data Table. Figures 2-4 depict the location of sites of concern, along with sections of the ISA Data Table specific to the depicted Phase of the project.

(2) Indicates primary information sources for listing: R=Reconnaissance, I=Interview, D=Database, H=Historical Source (Sanborns, historical aerial photographs, historical topographic maps)
(3) Risk of potential impacts onsite; Low /Moderate/Indeterminate/High
6.2 Opinions

HDR has reviewed the stated data sources, which are part of the ASTM 1527-13 assessment protocol, as well as NMDOT guidance. Based upon the review of the data, HDR has developed the following professional opinions:

- A total of 24 sites (High and Indeterminate Risk) were identified within or adjacent to the Project Corridor that constitute RECs, as defined by ASTM. Each of these sites has the potential to impact the project through the presence of residual contaminants in soil and/or groundwater. By project Phase, the 24 sites are divided as follows: Phase I – 7 sites; Phase II – 9 sites; and Phase III – 8 sites.

6.3 Conclusions

Based upon the above-detailed Findings and Opinions, HDR concludes that 24 RECs have been identified for the Project Corridor, as presented in the Findings section above. The following statement is required by ASTM E 1527-13 as a positive declaration of whether RECs were found within the Project Corridor:

*HDR has performed a Phase I ESA in conformance with the scope and limitations of ASTM E 1527-13 of the Bridge Blvd / Tower Road project, between Coors Blvd. (western terminus of the project) and 8th Street (eastern terminus of the project), located in Albuquerque and unincorporated Bernalillo County, New Mexico (Project Corridor). Any exceptions to or deletions from these practices are described in previous sections of this report. This report has revealed indications of RECs in connection with the Project Corridor.*
7.0 Recommendations

Recommendations included in this report were developed through the investigative procedures described in the Scope of Services, Significant Assumptions, and Limitations sections of this report. These findings should be reviewed within the context of the limitations provided in the Limitations section.

Based upon the identified RECs for the Project Corridor, HDR makes following recommendations:

Recommendation 1

HDR recommends that the client conduct Phase II site investigations for each site to determine location and severity of suspected impacts from the identified risk sites. The Phase II work should include drilling, sample collection for geologic parameters and laboratory analysis of soils, sample collection and laboratory analysis of groundwater samples (in areas where groundwater will be disturbed by the project), and a report of findings relative to regulatory action levels for the contaminants of concern. The Phase II work should be conducted in accordance with state and federal requirements regarding qualifications of staff, laboratory methods employed, and soil boring / monitoring well abandonment protocols adjudicated by the State.

Recommendation 2

HDR recommends that all construction contractors shall be instructed to immediately stop all subsurface activities in the event that potentially hazardous materials are encountered, an odor is identified, or significantly stained soil is visible. Contractors shall be instructed to follow all applicable regulations regarding discovery and response for hazardous materials encountered during the construction process.

Recommendation 3

HDR recommends that the client consider the “shelf life” of Phase I documents in determining risk. ASTM E 1527-13: 4.6 states that a conforming “Phase I” report is valid for a period of 180 days, and may be updated during the 180 days to 1-year timeframe. The report is valid for use in any of the CERCLA defenses ONLY if it is updated within this time frame. If greater than one year passes from the final report date, the Phase I effort would need to be repeated to remain in compliance with ASTM and the “All Appropriate Inquiry” (AAI) protection.
8.0 Qualifications of Environmental Professionals

8.1 Signature and Qualification

We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in Section 312.10 of 40 Code of Federal Regulations [C.F.R.] Part 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquires in conformance with standards and practices set forth in 40 CFR Part 312.

Qualified Environmental Professional
Kelly Kading, CPG
Hazardous Waste Leader - Transportation

Quality Control / Quality Assurance
Vincent M. Carbone, PG, CPG
Senior Geologist

8.1.1 Qualifications of Environmental Professionals

This Phase I ESA was performed by the following HDR personnel, whose resumes appear in Appendix F:

Mr. Kelly Kading, CPG an environmental professional as defined by ASTM E 1527-13, has more than 28 years of experience in assessment and remediation of impacted properties and compliance with environmental regulations. He has a B.S. in Geology from Colorado State University and is a Certified Professional Geologist (#9173). He specializes in forensic investigation of hazardous materials-impacted properties for municipal and state agencies, as well as commercial clients. His experience covers assessment of more than 3,000 properties ranging from agriculture land to multigenerational industrial properties in 34 states and 2 foreign countries. He is highly knowledgeable of federal, state, and local environmental regulations and standards and has served on the National Board of Directors of the Academy of Certified Hazardous Materials Managers.

Quality Assurance / Quality Control was performed by the following HDR Personnel:

Mr. Vincent M. Carbone, PG, CPG. Mr. Carbone is a senior geologist at HDR with over 23 years of experience in environmental assessment and remediation. Mr. Carbone is a Pennsylvania and Tennessee Professional Geologist, and a Certified Professional Geologist (CPG). His experience encompasses environmental site assessment, NEPA investigations, geotechnical investigations, remedial investigations, feasibility studies, interim remedial measures, site management, and operations, maintenance and monitoring. Mr. Carbone has worked with SEPTA and several other public transportation clients including PENNDOT, NJ Transit, NYSDOT and NYCDOT.

Sites listed in bold italics are in multiple databases.
Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA’s knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are

RCRA-CESQG: RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/09/2014 has revealed that there are 10 RCRA-CESQG sites within the searched area.

RCRA NonGen / NLR: RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/09/2014 has revealed that there are 8 RCRA NonGen / NLR sites within the searched area.

TSCA: The Toxic Substances Control Act identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site. The United States Environmental Protection Agency has no current plan to update and/or re-issue this database.

A review of the TSCA list, as provided by EDR, and dated 12/31/2012 has revealed that there are 2 TSCA sites within the searched area.

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, and dated 10/19/2006 has revealed that there are 2 HIST FTTS sites within the searched area.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 08/16/2014 has revealed that there are 87 FINDS sites within the searched area.

RAATS: The RCRA Administration Action Tracking System contains records based on enforcement actions issued under RCRA and pertaining to major violators. It includes administrative and civil actions brought by the United States Environmental Protection Agency. The source of this database is the U.S. EPA.

A review of the RAATS list, as provided by EDR, and dated 04/17/1995 has revealed that there is 1 RAATS site within the searched area.

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, and dated 10/16/2014 has revealed that there are 27 US AIRS sites within the searched area.

EDR PROPRIETARY RECORDS

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR’s researchers. Manufactured gas sites were used in the United States from the 1800’s to 1950’s to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within the searched area.

</tbody>
</table>

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR’s review was limited to those categories of sources that might, in EDR’s opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR’s HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 150 EDR US Hist Auto Stat sites within the searched area.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR’s review was limited to those categories of sources that might, in EDR’s opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as “High Risk Historical Records”, or HRHR. EDR’s HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 36 EDR US Hist Cleaners sites within the searched area.

RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the New Mexico Environment Department in New Mexico.

A review of the RGA LUST list, as provided by EDR, has revealed that there are 13 RGA LUST sites within the searched area.

### 2

**ALBUQUERQUE GAS AND ELECTRIC CO**

**SCS**

**119-121 SILVER AVE SE**

**ALBUQUERQUE, NM 87102**

**Manufactured Gas Plants:**

1885-1902 construction; operation 1902-1931, 1931-1933 phased out when San-Juan Basin natural gas pipeline came online throughout Albuquerque. Site had three main gas holders and three retorts. Waste type: Coal tar, coal oil lamp black, purifier wasters, ammonialt was built in phases, and demolished in place in approximately 1948. Main contamination issues were from coal tar and residual oils left in place at time of abandonment and dismantling. Removal action included the creative solution of taking tarry sandy coal and burning for fuel. Air permits were obtained based upon soil characterization allowing materials to be transported as fuels allowing removal action to produce energy instead of waste stream. Remediation work completed in 2003, Final Report approved January 2006.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Large Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F017
Waste name: Not Defined

Waste code: U013
Waste name: Not Defined

Waste code: U051
Waste name: CREOSOTE

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

New Mexico Tools for Environmental Management and Protection Organizations (NM-TEMPO) is New Mexico’s environmental management system.

#### Environmental Interest/Information System

**AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem)** replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

New Mexico Tools for Environmental Management and Protection Organizations (NM-TEMPO) is New Mexico’s environmental management system.

#### AIRS (AFS):

**Airs Minor Details:**

- **Plant name:** EVER READY OIL CO INC CHURCHILL CHEVRON

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA’s programs. The vision for ICIS is to replace EPA’s independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Waste code: D009
Waste name: MERCURY

Violation Status: No violations found

MAP F
IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

### Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

### AIRS (AFS):

#### Airs Minor Details:
- **EPA plant ID:** 110012157101
- **Plant name:** PARGIN CONSTRUCTION INC
- **Plant address:** 800 BRIDGE BLVD SW ALBUQUERQUE, NM 87105
- **County:** BERNALILLO
- **Region code:** 06
- **Dunn & Bradst #:** Not reported
- **Air quality cntrl region:** 152
- **Sic code:** 5541
- **Sic code desc:** GASOLINE SERVICE STATIONS
- **North Am. industrial classf:** Not reported
- **NAIC code description:** Not reported
- **Default compliance status:** IN COMPLIANCE WITH PROCEDURAL REQUIREMENTS
- **Default classification:** POTENTIAL UNCONTROLLED EMISSIONS < 100 TONS/YEAR
- **Govt facility:** ALL OTHER FACILITIES NOT OWNED OR OPERATED BY A FEDERAL, STATE, OR LOCAL GOVERNMENT
- **Current HPV:** Not reported

### Historical Compliance Minor Sources:

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAVENS TRUCKING
100 TRUMBULL SW
ALBUQUERQUE, NM 87102

Registry ID: 110012157977

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIRS (AFS):

Owner/Op end date:  Not reported

Handler Activities Summary:
U.S. importer of hazardous waste:  No
Mixed waste (haz. and radioactive):  No
Recycler of hazardous waste:  No
Transporter of hazardous waste:  No
Treater, storer or disposer of HW:  No
Underground injection activity:  No
On-site burner exemption:  No
Furnace exemption:  No
Used oil fuel burner:  No
Used oil processor:  No
User oil refiner:  No
Used oil fuel marketer to burner:  No
Used oil Specification marketer:  No
Used oil transfer facility:  No
Used oil transporter:  No

Hazardous Waste Summary:
Waste code:  D001
Waste name:  IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code:  D018
Waste name:  BENZENE

Waste code:  D039
Waste name:  TETRACHLOROETHYLENE

Waste code:  D040
Waste name:  TRICHLOROETHYLENE

Violation Status:  No violations found

Evaluation Action Summary:
Evaluation date:  08/02/2002
Evaluation:  COMPLIANCE ASSISTANCE VISIT
Area of violation:  Not reported
Date achieved compliance:  Not reported
Evaluation lead agency:  State

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

CRRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. CRRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:
Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Waste code: D009
Waste name: MERCURY

Violation Status: No violations found

Evaluation Action Summary:
Evaluation date: 04/08/2008
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE

AUTO FLEA MARKET
225 SOUTHERN AVE SE
ALBUQUERQUE, NM  87102

FINDS:

Registry ID: 110011029626

Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is
used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

New Mexico Tools for Environmental Management and Protection Organizations (NM-TEMPO) is New Mexico’s environmental management system.

AFS (AFS):

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that
Waycor (Continued)

these facilities release directly to air, water, land, or that are transported off-site.

New Mexico Tools for Environmental Management and Protection Organizations (NM-TMEO) is New Mexico’s environmental management system.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA’s programs. The vision for ICIS is to replace EPA’s independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

BUENO FOODS (Continued)

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

OSHA ESTABLISHMENT

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

AIRS (AFS):

Hazardous Waste Summary:
Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

**FRP**

New Mexico Tools for Environmental Management and Protection Organizations (NM-TEMPO) is New Mexico’s environmental management system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**AIRS (AFS):**

### Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance,
corrective action activities required under RCRA.

Hazardous Waste Summary:
- Waste code: D001
  - Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- Waste code: D002
  - Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS
USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

**Waste code:** D008  
**Waste name:** LEAD

### Hazardous Waste Summary:

#### Waste code: D001
- **Waste name:** Tetrahydrofuran (THF) and Ethylbenzene
- **Description:** A waste which has a specific property that makes it hazardous. THF is a highly flammable solvent, and ethylbenzene is a carcinogenic substance.

#### Waste code: D002
- **Waste name:** Trichloroethylene
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D039
- **Waste name:** Tetrachloroethylene
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D040
- **Waste name:** Acetone
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D041
- **Waste name:** Methanol
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D042
- **Waste name:** Ethanol
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D043
- **Waste name:** Isopropanol
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D044
- **Waste name:** Propylene glycol
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D045
- **Waste name:** Diethylene glycol
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D046
- **Waste name:** Formaldehyde
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D047
- **Waste name:** Acrylonitrile
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D048
- **Waste name:** Butadiene
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D049
- **Waste name:** Ethylene glycol
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D050
- **Waste name:** Dimethyl sulfoxide
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D051
- **Waste name:** Ethanolamine
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D052
- **Waste name:** N-Methylpyrrolidone
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D053
- **Waste name:** N,N-Dimethylformamide
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D054
- **Waste name:** N,N-Dimethylacetamide
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D055
- **Waste name:** N,N-Dimethylpropionamide
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D056
- **Waste name:** N,N-Dimethylbutyramide
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D057
- **Waste name:** N,N-Dimethylpentanamide
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D058
- **Waste name:** N,N-Dimethylhexanamide
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D059
- **Waste name:** N,N-Dimethylheptanamide
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D060
- **Waste name:** N,N-Dimethyloctanamide
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D061
- **Waste name:** N,N-Dimethylnonanamide
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D062
- **Waste name:** N,N-Dimethyldodecanamide
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D063
- **Waste name:** N,N-Dimethylpentadecanamide
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D064
- **Waste name:** N,N-Dimethylhexadecanamide
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D065
- **Waste name:** N,N-Dimethylheptadecanamide
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D066
- **Waste name:** N,N-Dimethylhexadecanamide
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D067
- **Waste name:** N,N-Dimethylundecanamide
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D068
- **Waste name:** N,N-Dimethyltridecanamide
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D069
- **Waste name:** N,N-Dimethyltetradecanamide
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D070
- **Waste name:** N,N-Dimethylpentadecanamide
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D071
- **Waste name:** N,N-Dimethylhexadecanamide
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D072
- **Waste name:** N,N-Dimethylheptadecanamide
- **Description:** A highly flammable solvent used in various industries.

#### Waste code: D073
- **Waste name:** N,N-Dimethylhexadecanamide

- **Description:** A highly flammable solvent used in various industries.
**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
New Mexico Tools for Environmental Management and Protection
Organizations (NM-TEMPO) is New Mexico's environmental management system.

ICIS (Integrated Compliance Information System) is the Integrated
Compliance Information System and provides a database that, when
complete, will contain integrated Enforcement and Compliance
information across most of EPA's programs. The vision for ICIS is to
replace EPA's independent databases that contain Enforcement data with
a single repository for that information. Currently, ICIS contains all
Federal Administrative and Judicial enforcement actions. This
information is maintained in ICIS by EPA in the Regional offices and it
Headquarters. A future release of ICIS will replace the Permit
Compliance System (PCS) which supports the NPDES and will integrate
that information with Federal actions already in the system. ICIS also
has the capability to track other activities occurring in the Region
that support Compliance and Enforcement programs. These include;
Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:
- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

New Mexico Tools for Environmental Management and Protection Organizations (NM-TEMPO) is New Mexico’s environmental management system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

### Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

### Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

</table>
To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

**FEDERAL RECORDS**

**NPL: National Priority List**
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA’s Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

| Date of Government Version: 09/29/2014 | Source: EPA |
| Date Data Arrived at EDR: 10/08/2014 | Telephone: N/A |
| Date Made Active in Reports: 11/17/2014 | Last EDR Contact: 01/08/2015 |
| Number of Days to Update: 40 | Next Scheduled EDR Contact: 04/20/2015 |

**NPL Site Boundaries**

  Telephone 206-553-8665

**Proposed NPL: Proposed National Priority List Sites**
A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

| Date of Government Version: 09/29/2014 | Source: EPA |
| Date Data Arrived at EDR: 10/08/2014 | Telephone: N/A |
| Date Made Active in Reports: 11/17/2014 | Last EDR Contact: 01/08/2015 |
| Number of Days to Update: 40 | Next Scheduled EDR Contact: 04/20/2015 |

**DELISTED NPL: National Priority List Deletions**
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Data Release Frequency: Quarterly
NPL LIENS: Federal Superfund Liens
Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority
to file liens against real property in order to recover remedial action expenditures or when the property owner
received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991  Source: EPA
Date Data Arrived at EDR: 02/02/1994  Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994  Last EDR Contact: 08/15/2011
Number of Days to Update: 56  Next Scheduled EDR Contact: 11/28/2011
Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities,
private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation,
and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities
List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013  Source: EPA
Date Data Arrived at EDR: 11/11/2013  Telephone: 703-412-9810
Date Made Active in Reports: 02/13/2014  Last EDR Contact: 01/09/2015
Number of Days to Update: 94  Next Scheduled EDR Contact: 03/09/2015
Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status
indicates that, to the best of EPA’s knowledge, assessment at a site has been completed and that EPA has determined
no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates
this decision was not appropriate or other considerations require a recommendation for listing at a later time.
This decision does not necessarily mean that there is no hazard associated with a given site; it only means that,
based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 10/25/2013  Source: EPA
Date Data Arrived at EDR: 11/11/2013  Telephone: 703-412-9810
Date Made Active in Reports: 02/13/2014  Last EDR Contact: 01/09/2015
Number of Days to Update: 94  Next Scheduled EDR Contact: 03/09/2015
Data Release Frequency: Quarterly

LIENS 2: CERCLA Lien Information
A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent
Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination.
CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 02/18/2014  Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/18/2014  Telephone: 202-564-6023
Date Made Active in Reports: 04/24/2014  Last EDR Contact: 01/30/2015
Number of Days to Update: 37  Next Scheduled EDR Contact: 05/11/2015
Data Release Frequency: Varies

CORRACTS: Corrective Action Report
CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 12/09/2014  Source: EPA
Date Data Arrived at EDR: 12/29/2014  Telephone: 800-424-9346
Date Made Active in Reports: 01/29/2015  Last EDR Contact: 12/29/2014
Number of Days to Update: 31  Next Scheduled EDR Contact: 04/13/2015
Data Release Frequency: Quarterly

RCRA-TSDF: RCRA - Treatment, Storage and Disposal
RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation
and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database
includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste
as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that
move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the
waste. TSDFs treat, store, or dispose of the waste.
RCRA-LQG: RCRA - Large Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

RCRA NonGen / NLR: RCRA - Non Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.
US ENG CONTROLS: Engineering Controls Sites List
A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

US INST CONTROL: Sites with Institutional Controls
A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

<td>US BROWNFIELDS</td>
<td>A Listing of Brownfields Sites</td>
</tr>
<tr>
<td>Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.</td>
<td></td>
</tr>
<tr>
<td>DOD: Department of Defense Sites</td>
<td>This data set consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.</td>
</tr>
<tr>
<td>FUDS: Formerly Used Defense Sites</td>
<td>The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.</td>
</tr>
<tr>
<td>LUCIS: Land Use Control Information System</td>
<td>LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.</td>
</tr>
<tr>
<td>CONSENT: Superfund (CERCLA) Consent Decrees</td>
<td>Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.</td>
</tr>
</tbody>
</table>
ROD: Records Of Decision
Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical
and health information to aid in the cleanup.

Date of Government Version: 11/25/2013  Source:  EPA
Date Data Arrived at EDR: 12/12/2013  Telephone:  703-416-0223
Date Made Active in Reports: 02/24/2014  Last EDR Contact: 12/12/2014

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills
shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from
the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings
were used as construction materials before the potential health hazards of the tailings were recognized.

Data Release Frequency: Annually
TSCA: Toxic Substances Control Act
Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/2012
Date Data Arrived at EDR: 01/15/2015
Date Made Active in Reports: 01/29/2015
Number of Days to Update: 14
Data Release Frequency: Every 4 Years

FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/09/2009
Date Data Arrived at EDR: 04/16/2009
Date Made Active in Reports: 05/11/2009
Number of Days to Update: 25
Data Release Frequency: Quarterly

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007
Date Made Active in Reports: 04/10/2007
Number of Days to Update: 40
Data Release Frequency: No Update Planned

HIST FTTS INSPI: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007
Date Made Active in Reports: 04/10/2007
Number of Days to Update: 40
Data Release Frequency: No Update Planned
SSTS: Section 7 Tracking Systems
Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2009
Date Data Arrived at EDR: 12/10/2010
Date Made Active in Reports: 02/25/2011
Number of Days to Update: 77

ICIS: Integrated Compliance Information System
The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

Date of Government Version: 07/31/2014
Date Data Arrived at EDR: 10/29/2014
Date Made Active in Reports: 11/06/2014
Number of Days to Update: 8

PADS: PCB Activity Database System
PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB’s who are required to notify the EPA of such activities.

Date of Government Version: 07/01/2014
Date Data Arrived at EDR: 10/15/2014
Date Made Active in Reports: 11/17/2014
Number of Days to Update: 33

MLTS: Material Licensing Tracking System
MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 12/29/2014
Date Data Arrived at EDR: 01/08/2015
Date Made Active in Reports: 01/29/2015
Number of Days to Update: 21

RADINFO: Radiation Information Database
The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 10/07/2014
Date Data Arrived at EDR: 10/08/2014
Date Made Active in Reports: 10/20/2014
Number of Days to Update: 12

FINDS: Facility Index System/Facility Registry System
Facility Index System. FINDS contains both facility information and ‘pointers’ to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).
RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

BRS: Biennial Reporting System

The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.
SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List
The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EDR PROPRIETARY RECORDS

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR’s review was limited to those categories of sources that might, in EDR’s opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as “High Risk Historical Records”, or HRHR. EDR’s HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

RGA LUST: Recovered Government Archive Leaking Underground Storage Tank
The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the New Mexico Environment Department in New Mexico.

Date of Government Version: N/A
Date Data Arrived at EDR: 07/01/2013
Date Made Active in Reports: 01/03/2014
Number of Days to Update: 186

Last EDR Contact: 06/01/2012
Next Scheduled EDR Contact: N/A
Data Release Frequency: Varies

OTHER DATABASE(S)
Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NY MANIFEST: Facility and Manifest Data
Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Date of Government Version: 11/01/2014
Date Data Arrived at EDR: 11/05/2014
Date Made Active in Reports: 11/24/2014
Number of Days to Update: 19
Source: Department of Environmental Conservation
Telephone: 518-402-8651

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association’s annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics’ primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.
Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Child Day Care Providers
Source: Office of Child Development
Telephone: 505-827-7946

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Earthquake Fault Lines: The fault lines displayed on EDR’s Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey.

Appendix F – Resumes
Kelly W. Kading, CPG
Transportation Program Hazardous Waste Leader

Professional Experience

Mr. Kading has 27 years of experience in hazardous materials assessment and remediation, transportation corridor assessment, NEPA coordination, and project and program management. He performs hazardous materials assessments of transportation corridor projects as well as Phase I and Phase II Assessments, up to and including recommendations for mitigation or remediation measures. Mr. Kading is also well versed in the preparation of NEPA documentation on sensitive transportation projects. He is familiar with federal and state regulatory requirements, and has worked on projects located in 34 states. The following projects represent Mr. Kading's recent project experience:

HDR Project Experience

**Ace Insurance, Third-party Review, Goodyear, Arizona.** Hazardous materials manager who provided technical analysis and third-party review of environmental claims related to a major industrial fire in Goodyear.

**AGL Constructors Joint Venture, I-35 E design-build, Dallas to Denton Managed Lanes, Dallas and Denton Counties, Texas.** Hazardous materials manager for a 30-mile long interstate highway widening and managed lanes project. The project includes acquisition of over 120 parcels, including individual Phase Is for all parcels, and Phase II work for a subset of parcels. The hazardous materials assessment portion of this project is over $1.5MM of a $1.2B total project budget. All work has been performed under a very tight timeframe, and within a rigorous QAQC protocol.

**Arizona Department of Transportation, Kingman and Bullhead City Disposal Parcels.** Hazardous materials manager who provided Phase I services for a package of seven properties currently owned by ADOT and slated for sale (disposal). The properties were assessed in general conformance with ASTM E 1527-05 and the new-in-2006 All Appropriate Inquiry standards as codified in the 2002 Brownfields Act. This work was performed under the ADOT Environmental Services On-call contract 06-3.3. The Phase I process identified issues of concern, if present, that might affect the valuation or potential sale of the seven parcels. The project was performed in an expedited timeframe.

**Arizona Department of Transportation, Phase I/II Investigation, Post-closure Environmental Analysis, SR 179 Improvement Project/Sedona Chevron Site, Sedona, Arizona.** Project manager responsible for performing Phase I and Phase II services for the SR 179 improvement project, which included installation of a traffic roundabout, which in turn required right-of-way acquisition. Also performed oversight for the removal of the underground storage tanks. Extensive contamination was encountered and over 1,000 cubic yards of impact soil was removed from the site. In addition, HDR negotiated with ADEQ to consider the cleanup of remaining deep groundwater impacts at the site to be combined with a neighboring high-priority, state-led cleanup at another service station. This negotiation allowed ADOT to stay on schedule with construction of the new roundabout at this critical intersection in Sedona. HDR worked with ADOT, ADEQ, and the remediation contractor at the neighboring site to ensure clarity of communication and to assist ADOT in its construction program.

**Arizona Department of Transportation, ADOT Environmental On-call Contract 2006 & 2009, Phoenix, AZ.** Hazardous materials assessment for statewide environmental On-call
services including a wide variety of technical studies in support of NEPA documentation. Mr. Kading manages the hazardous materials analysis task for all task orders under ADOT Statewide Environmental On-call contracts. To date, Mr. Kading has managed over 300 hazardous materials studies for ADOT, ranging from basic risk-analysis PISAs to intrusive PSI investigations in support of litigation. Mr. Kading has also assisted ADOT with preparation and refinement of internal standards and protocols for the performance of hazardous materials investigations.

Arizona Department of Transportation, ADOT MC, 801 East DCR/EA, SR 303L to SR 202L (Task 3). Hazardous materials assessment for this project providing engineering and environmental documents for the proposed SR 801 freeway between SR 303 and SR 202L, which is approximately 26 miles long, in the southwest part of the Phoenix Valley traversing 5 local jurisdictions. Specific tasks include the preparation of a Corridor Alternative Selection Report (ASR), three System Interchange Selection Reports, a Location/Design Concept Report (L/DCR), two Environmental Assessments (EA), and 30% preliminary engineering documents. Hazardous materials analysis included assessment of all potential corridors for constraints related to hazardous materials releases.

Arizona Department of Transportation, Hazardous Materials Transportation Assessment, AZ. Project director responsible for providing a pilot study for the transportation of hazardous materials throughout the state of Arizona for ADOT. The project included analysis and synthesis of a wide range of data types involving shipment of hazardous materials through and within the state, by road, rail, and air transport modes. An important element of the analysis was a comparison of risk modeling and applicability to the decision-making process for hazardous shipment routing.

Arizona Department of Transportation, Procurement On-call: Phase I and Phase II Site Assessments, Tempe, Tucson, and Picacho, AZ. Project Manager for over 20 Phase I and Phase II investigations related to widening projects for I-10. Specific projects included apartment complexes in Tempe, active gas stations and industrial properties in Phoenix, Tucson and Picacho. Phase II work was designed to assist ADOT Right-of-Way in determining possible valuation reductions for impacted properties. For the I-10 Picacho project, HDR provided Environmental Construction Monitoring prior to and during the removal of the entire village of Picacho, handling all aspects of hazardous waste identification, removal, and disposal.

Arizona DOT-Tucson, I-10, Ina Road TI to Ruthrauff Road TI, Tucson, Arizona. Hazardous materials assessment for this project to prepare a Design Concept Report and Implementation Plan to derive fundable projects for inclusion in future ADOT Five-Year Highway Construction Programs, while conducting public involvement activities to assure local and agency concurrence with the proposed long-range plan. Hazardous materials tasks included assessment of several industrial facilities with either known or potential contamination issues that would affect the construction process, as well as the property acquisition issue.

BNSF Railway Company, Abo Canyon Final Design, New Mexico. Hazardous materials assessment for a proposed 5-mile double track project on a key portion of BNSFs transcontinental mainline through Abo Canyon in central New Mexico. In addition to providing all engineering design services, HDR performed and/or managed a delineation of waters of the U.S., vegetation mapping, threatened / endangered species, and cultural resources. Hazardous materials tasks were focused on potential residual impacts from a train derailment, fire, and hazardous materials release that occurred in the 1980s.

Confidential Client, Granite Creek Bridge Project, Prescott, Arizona. Project manager for an investigation to characterize the waste material at the site of a four-lane roadway widening and bridge replacement project, which required acquisition of additional right-of-
The investigation included drilling and advancing test pits, all performed under stringent health and safety requirements. Coordination with a cultural resources specialist and several state and federal agencies was required. Mitigation requirements were developed to allow construction to proceed.

**Galveston County Water Control & Improvement District #1, Sewer Line Replacement Hazardous Materials Analysis, Dickinson, Texas.** Hazardous materials manager who provided an ASTM-compliant Phase I for a package of sewer line improvement projects throughout the town of Dickinson. The challenges to the project included shallow groundwater, multiple contaminant sources, and lingering impacts from Hurricane Ike.

**Iberdrola Renewables, Inc., Dry Lake Wind Project Phase 1, Snowflake, AZ.** Hazardous materials manager for the phased siting and development of 378 megawatts of wind energy on federal, state, and private lands in Navajo County, Arizona. HDR’s primary role was assisting Iberdrola and the BLM in complying with NEPA by preparing the project-specific environmental assessment. Additionally, HDR conducted the visual resource analysis, cultural resource surveys, and Phase I Environmental Site Assessment, as well as provided general environmental/regulatory support. The Phase I ESA was challenging in that the 77-square-mile study area was generally not accessible by car. HDR employed an aerial platform review (helicopter) to quickly and thoroughly perform a reconnaissance of the study area for hazardous waste issues. Specifically assessed were areas of illegal dumping, which were easily identified from the air. The aerial survey team also included specialists in geology, habitat analysis, and engineering.

**Lake Havasu City, London Bridge Repair Technical Support, Lake Havasu City, Arizona.** Hazardous materials manager who provided hazardous materials analysis for a planned entry and repair of a leaking pier chamber. Suspected metals and volatiles in a closed bridge pier chamber were analyzed for contaminants prior dewatering and disposal of water from the flooded pier chamber.

**MRCOG, NM Rail Runner Express, Phase I (Belen to Bernalillo), NM.** Hazardous materials assessment for this project to convert a heavy rail line to commuter rail uses. Specific tasks include: evaluation of existing railroad crossings; recommendations for closures and consolidation of crossings; evaluation of alternative commuter rail station locations; development of service designs for the planned commuter rail system; coordination with the BNSF Railway; planning and design of commuter rail stations including access, parking, and platform design activities. The hazardous materials aspect of the project involved completion of Phase I and Phase II work for the 50-mile segment from Belen to Bernalillo. This segment traverses the most heavily industrialized part of metropolitan Albuquerque, and included hazardous materials evaluation of over 350 specific sites. The Phase I was completed under an expedited timeframe, and was used as a valuation tool in the rail line transaction. The Phase II specifically evaluated contamination at two sites slated for use as passenger stations or maintenance facilities.

**National Park Service, NPS 2004 - 2009 IDIQ - Task Order 45: Willow Beach Hazardous Materials Survey for Asbestos and Lead-Based Paint, Lake Mead National Recreation Area (Also AZ), NV, Lake Mead National Recreation Area (Also NV), AZ.** Hazardous materials assessment for investigation of six buildings at Willow Beach to determine the extent of asbestos and lead-based paint levels.

**Navajo Nation Gaming Enterprise, Twin Arrows (Task 2 - DCR), AZ.** Hazardous materials manager responsible for the preparation of ASTM-compliant Phase Is of a casino site (on Navajo property) and access road site (on private property). Original reports plus updates have been completed to keep the data current.

**New Mexico Department of Transportation, Statewide Hazardous Materials**
Investigation Contracts, New Mexico. Hazardous materials manager responsible for more than 220 hazardous materials investigations for the New Mexico Department of Transportation (NMDOT) between 1993 and 2007, including Initial Site Assessments (ISA), Preliminary Site Investigations (PSI), Detailed Site Investigations (DSI), and Environmental Construction Monitoring (ECM). Projects have included the largest, longest, and highest fee ISA and PSI projects ever undertaken by NMDOT. Mr. Kading has also assisted in drafting NMDOT protocols for performance of ISA, PSI, and DSI projects. Mr. Kading helped NMDOT to develop their ECM protocol on the Business I-25 Route rebuild project (Raton), a protocol still in use today. Other work included NEPA documentation, specifically the initial corridor analysis for the I-25 to NM47 connection (Valencia County) and the Environmental Assessment for NM44 (US 550) Bernalillo to San Ysidro. NEPA projects included extensive coordination with federal agencies and tribal entities regarding sensitive environmental issues. Authored the Noxious Weed Management Plan for the Alamogordo Relief Route project.

Pima County Dept of Transportation, La Cholla Boulevard, Ruthrauff to River, Tucson, Arizona. Hazardous materials assessment for a project to widen La Cholla Boulevard to a six-lane divided roadway from Ruthrauff Road to River Road in order to improve safety, reduce congestion, improve operations and increase mobility. Potential improvements include a new six-lane bridge over the Rillito River, additional travel lanes; a raised landscaped median, multi-use lanes; outside curbs and storm drains; sidewalks; and screening and noise mitigation for adjacent residential areas. Hazardous materials assessment tasks included performance of an ASTM-compliant Phase I, and Phase II investigation of current and former service station sites. Also investigated were the limits of adjacent historic landfills that were believed to encroach upon the roadway property.

Pima County Dept of Transportation, La Cañada Drive, River Road to Ina Road, Tucson, AZ. Hazardous materials assessment for this project that consists of widening the existing roadway from River Road to Ina road to a four-lane divided roadway in order to improve safety, reduce congestion, improve operations and increase mobility. Potential improvements include additional travel lanes; a raised landscape median; multi-use lanes; outside curbs and storm drains; provisions for pedestrians, equestrians and other uses; and, screening and noise mitigation for adjacent residential areas. Hazardous materials assessment tasks included performance of an ASTM-compliant Phase I, and Phase II investigation of structures planned for demolition.

Port of San Antonio, Phase I / II Investigation Proposed 36th Avenue Realignment Project, San Antonio, Texas. Project manager responsible for determining whether historic contamination issues associated with Kelly AFB operations would cause cost or schedule issues for a new access road and drainage improvements. HDR performed an exhaustive review of documents (Phase I) detailing several assessment and cleanup operations along the proposed access road route. A targeted drilling and sampling program (Phase II) was implemented to mitigation recommendations made for the construction phase. Detailed statistical analysis was performed on soil sample results regarding arsenic content, and HDR successfully negotiated with the Texas Commission on Environmental Quality to classify the arsenic levels in soil as background. This detailed analysis and negotiation saved the client over $2 million in hazardous waste disposal costs, and allowed the project to proceed on schedule.

Port of Vancouver, WA, West Vancouver Freight Access Project, Vancouver, WA. HDR is performing engineering and environmental services needed to prepare preliminary and final plans, specifications and cost estimates for a series of 19 projects to be completed through 2015. Hazardous materials tasks included Phase II work, analysis of impacts to a liner for an onsite hazardous waste containment cell, and replacement of three displaced
monitoring wells.

**Regional Transportation Commission, Laughlin-Bullhead City Bridge Project on the Lower Colorado River, NV and AZ, Laughlin, NV.** Hazardous materials manager who provided technical analysis for the Phase I hazardous materials investigation task for the Environmental Assessment (NEPA) for this project. The project included construction of a new bridge across the Colorado River on the south side of Laughlin / Bullhead City. Three alignments were under consideration, and the presence of potential hazardous material release sites was one of the issues analyzed during the EA. Potential risk sites were identified using the data review and field reconnaissance protocols outlined in ASTM. Sites were assigned a relative risk level, and presented in a matrix format to assist with decision-making in the EA.

**SANBAG, Redlands First Mile Rail Project, San Bernardino, California.** Hazardous materials manager who provided Phase I and Phase II support services for a major transit project, including planned reconfiguration of track and purchase of properties for the San Bernardino Transit Authority. Corridor-level and site-specific Phase Is were prepared to identify construction risks and to provide valuation support for properties slated for acquisition. Phase II work included analysis of 18 sites with a wide variety of issues and contaminants of concern. Phase II analysis included a complex analytical program that provided compliance information for several State of California regulatory programs.

**VeraSun Energy, Tilton, Illinois Site Evaluation, Tilton, IL.** Hazardous materials project manager who assisted with environmental permitting and plant siting/engineering for a new ethanol conversion plant in Tilton, Illinois. The proposed site was located adjacent to a Superfund site that had identified issues with metals and solvents in soil and groundwater. Following a Phase I effort that included extensive review of prior investigations at the neighboring Superfund site (and other risk sites located nearby), HDR designed a targeted soil and groundwater investigation (Phase II). The investigation included drilling and sampling across several hundred acres of an active agricultural operation. Sixteen monitoring wells were installed, and groundwater elevation data was compiled to determine subsurface fate and transport mechanisms for any fugitive contaminants. The project included quarterly monitoring of groundwater quality and flow conditions to analyze fate and transport parameters through seasonal changes. The project resulted in a positive siting analysis for the client. The Phase II was completed under extremely tight timeframes with daily briefings of the client representative and legal staff.

**City of Anaheim / SCRRRA / OCTA, State College Boulevard Grade Separation Project, Anaheim, California.** Hazardous materials manager who provided Phase I and (future) Phase II support services for a grade separation project. Corridor-level and site-specific Phase Is were prepared to identify construction risks and to provide valuation support for properties slated for acquisition. Phase II work will include analysis of 5 sites with a wide variety of issues and contaminants of concern. Phase II analysis will include a complex analytical program that provided compliance information for several State of California regulatory programs.
Vincent M. Carbone, PG, CPG

**Experience**

Mr. Carbone is a senior geologist at HDR with over 20 years of experience in hazardous waste and petroleum spill site investigations and remediation in eastern United States. His experience encompasses Phase I and Phase II assessments, remedial investigations, geophysical studies, feasibility studies, interim remedial measures, site management, and operations, maintenance and monitoring. Mr. Carbone is responsible for the geologic and hydrogeologic interpretation of geology and hydrogeology projects. He has conducted site investigations (including exploratory drilling, test pits, and Mr. Carbone has been the environmental manager for several complex decommissioning projects including Bethlehem Steel and coal fossil plants.

**Lehigh Valley Economic Development Corporation (LVEDC), Brownfields Redevelopment Assistance, Bethlehem, PA.** Mr. Carbone is program manager for LVEDC’s Brownfields Coalition Grant. He is responsible for assisting LVEDC manage a one million dollar assessment grant to complete Phase I, Phase II environmental site assessments and planning for Brownfields redevelopment sites. He has over eight years in providing technical assistance for several USEPA Brownfields grants including $200,000 Hazardous Materials and Petroleum Assessment Grants. All total, Mr. Carbone has provided technical assistance on over 50 Brownfields sites within the Lehigh Valley for over $3,000,000 in Brownfields assessment grant projects. He also provides support for several Targeted Brownfields Assessment Projects obtained through LVEDC.

**Bethlehem Steel South Side Redevelopment, Bethlehem, PA.** Mr. Carbone is a project manager responsible for environmental investigations including design and implementation of soil and groundwater investigations at this site. He provided fate and transport and hazard evaluation on the site. Mr. Carbone is responsible for the design of assessment and remediation plans based on the end use of the property, incorporating the design of the proposed facility into the redevelopment plans. Plans often utilized engineering and institutional controls and risk assessment to minimize the need for active remediation and allowing for cost effective redevelopment of the property.

**PADEP, Coca-Cola Park Site Redevelopment, Allentown, PA.** As project manager, Mr. Carbone provided oversight and management for the redevelopment of the Agere South property into Coca-Cola Park. Mr. Carbone provided oversight for property remediation that included the use of engineering and institutional controls in obtaining a release of liability for the property through the PADEP Act 2 program. Mr. Carbone authored a Final Report to PADEP for the County of Lehigh to demonstrate that the remedial
objectives approved by PADEP were complete, allowing Lehigh County with a release of liability under the PADEP Act 2 Program.

**City of Allentown, Allentown State Hospital Site Redevelopment, PA.** As program manager, Mr. Carbone was responsible for the project management and assessment of environmental conditions on a portion of the Allentown State Hospital Property. The work was being completed by the City of Allentown and Allentown Economic Development Corporation (AEDC) to complete a Phase I Environmental Site Assessment on 30 acres of Allentown State Hospital property. Mr. Carbone supported and provided assistance in obtaining a TBA grant of $140,000 to complete assessment activities on the site. He has also developed a Cleanup Plan for site impacts and is in the process of completing bid specifications for the removal of impacted materials form the site. Mr. Carbone is assisting the City of Allentown in developing the property into a mixed use parcel. The intended use of the parcel by the city is for small commercial development and construction of an elderly care facility.

**Allentown Economic Development Corporation. Calo Building Site Redevelopment, Allentown, PA.** As program manager, Mr. Carbone is assisting Allentown Economic Development Corporation (AEDC), and the County of Lehigh in the demolition and redevelopment of the Calo Building, an approximately 9 acre parcel is part of the City of Allentown Lehigh Landing project including the revitalization of several properties along the Lehigh River. He is part of a team of local and regional agencies, including the City of Allentown, AEDC, Lehigh County, Lehigh Valley Economic Development Corporation (LVEDC), Pennsylvania Department of Environmental Protection (PADEP) and the United States Environmental Protection Agency (USEPA) developed to address environmental concerns with the building and assist in the redevelopment of the property. Mr. Carbone is now a project manager working with the City of Allentown to develop bid specifications and provide oversight of building demolition ensuring compliance with USEPA grant and loan requirements.

**Allentown Economic Development Corporation, Hess Department Store Site Redevelopment, Allentown, PA.** Mr. Carbone was the project manager and provided oversight for the Hess Department Store building demolition along Hamilton Avenue between Eighth and Ninth Streets in the City of Allentown. He was responsible for pre-bid meetings and site walk throughs with prospective demolition bidders to discuss environmental issues. Mr. Carbone provided oversight to ensure that the hazardous materials contractors adhered to the terms of the contract, reviewed invoice documentation submitted by the hazardous materials contractor. He was responsible for maintaining and providing disposal documentation to AEDC following building demolition and to act as a liaison between PADEP and AEDC. Mr. Carbone also provided assistance in obtaining a state grant to fund the hazardous materials abatement work.
Publications and Presentations

Presentation: Dense Non-aqueous Phase Liquids Characterization and Remediation Techniques

Presentation: Practical Approach to Managing the Uncertainties of Vapor Intrusion in Redevelopment Projects
